## VOGO becomes a member of ETSI

### A decisive advantage in grabbing future opportunities in 5G

**VOGO (Code ISIN: FR0011532225 - Ticker: ALVGO)** is pleased to announce its ETSI membership. In joining this key sector institution, VOGO not only obtains recognition for its technology, it also gains an advantage when it comes to grasping opportunities arising from future rollouts of 5G infrastructure and applications.

[ETSI](#) is a European organisation that develops and promotes globally accepted standards for Information and Communication Technology (ICT)-enabled systems, networks, applications and services. Its standards are implemented across five continents. ETSI works with players in all of these markets with a view to harmonising technological connectivity and interoperability at international level. The organisation has over 900 members, including the leading technology and telecommunications players worldwide (Samsung, Orange, Nokia, Google, the BBC, etc.). Its members contribute directly to establishing new industry standards. As such, membership of the Institute constitutes a decisive advantage in rapidly adopting the new standards.

*“Through our membership of ETSI, VOGO is at the heart of the organisation and will be able to benefit from new innovative developments and greater visibility due to being part of a whole ecosystem of first-rate technological players. Our member status will also be a tremendous asset in ensuring we are at the forefront of upcoming 5G developments. The arrival of this new generation of network technologies stands as a genuine opportunity for VOGO, notably paving the way to the integration of new functionalities into our solutions and reduce our time-to-market in the sports and entertainment sectors.” says VOGO co-founder and CTO, Daniel Dédisse.*

#### About VOGO

Founded in 2013, VOGO develops, markets and distributes a solution for broadcasting live audiovisual content based on streamed video processing technology protected by four patents. Its disruptive technology, the performance of which is unrelated to the number of people connecting to it, aims to improve spectator experience by providing on-demand, multi-camera content, either live or on replay, along with analytical audio and video tools for professional usage. Since its inception, VOGO has already covered over 1,400 events in more than 20 athletic disciplines on 4 continents.
